

Web Technology

Assignment 6

Due: you don't have to submit this sheet

1. Write a contact me web form using PHP, the form should ask the user for: (email, name, subject, message), and send his message to (ahmed@gmail.com).

2. True or False?

- When using the POST method, variables are displayed in the URL.
- PHP doesn't allow you to send emails directly from a script.
- mysql_connect() still a valid function in PHP to connect to MySQL database.
- In PHP you can directly print the result of a database 'select statement' with print_r() function .
- You can connect PhP to MySQL database only.

3. Read the following PHP code then answer the questions:

```
1 <?php
2     $db=mysqli_connect("localhost","root","","mydb");
3     -----
4     -----
5     -----
6     -----
7     -
8     -----
9     $query="select * from users where name like 'a%'";
10    -----
11    -----
12    -----
13    -----
14    -----
15    -----
16    -----
    -
    ?>
```

- Starting from line 3, write a PHP code to check if the database connection succeed or not?.
- What should the select statement in line 8 retrieve? .
- Starting from line 10 write a PHP code to execute and print the select statement in line 8.
